INTRODUCED BIRD INTERACTION SURVEY

IBISurvey: Introduced Bird Interaction Survey is a Citizen Science project of the University of Évora (PT). Its main objective is to assess the environmental, societal and economic impacts of introduced birds in European countries. We encourage observers to report interactions between introduced birds and other animals, plants and humans. Your involvement is essential for helping us to identify which introduced bird species are becoming invasive and to improve our assessment of their environmental, societal and economic impacts.

1. Have you seen an introduced bird in the wild?
2. What kind of behaviours did you observe?
Did the birds show breeding behaviour?
What kind of food items were the birds eating?
Did you observe aggressive behaviours?

3. Submit your observations at:
Introduced Bird Interaction Survey!

www.labor.uevora.pt/ibisurvey/

Thank you for your participation!

Research team (University of Évora, Portugal): Pedro Filipe Pereira, Carlos Godinho, Inês Roque, João Eduardo Rabaça, Rui Lourenço
